1. DESIGN

تصميم

At HALSCO, we turn your vision into reality through a collaborative architectural process that blends creativity, functionality, and sustainability. From concept to final documentation, our 3D visualizations and detailed drawings ensure clarity, compliance, and lasting quality. We craft elegant finishes that define each space, selecting materials, colors, and textures suited to the climate and your style. Our interior design services create modern, functional spaces that reflect your identity, balancing comfort, culture, and contemporary aesthetics.

في هالسكو، نحوّل رؤيتك إلى واقع من خلال عملية معمارية تعاونية تجمع بين الإبداع والوظائف والاستدامة. من الفكرة إلى الوثائق النهائية، تضمن تصوراتنا ثلاثية الأبعاد والرسومات التفصيلية الوضوح والامتثال والجودة الدائمة. نصمم تشطيبات أنيقة تحدد كل مساحة، مع اختيار المواد والألوان والقوام بما يتناسب مع المناخ وأسلوبك. كما توفر خدمات التصميم الداخلي لدينا مساحات عصرية وعملية تعكس هويتك، مع تحقيق توازن بين الراحة والثقافة والجماليات المعاصرة.

2. LANDSCAPING & IRRIGATION

المناظر الطبيعية والري

At HALSCO, we create outdoor spaces that are both beautiful and sustainable. Our designs extend the building's architecture, blending seamlessly with the environment while balancing aesthetics, function, and year-round enjoyment. We use native plants, smart irrigation, and water-saving techniques to ensure eco-friendly results. Our process starts with a detailed site analysis- climate, soil, and space - leading to a strategic master plan with tailored plant and material choices. Skilled landscapers and engineers then bring the design to life, integrating hardscapes, softscapes, and lighting into a harmonious, sustainable space.

في HALSCO نصمم مساحات خارجية تجمع بين الجمال والاستدامة . تمتد تصاميمنا لتكمل الطابع المعماري للمبنى وتنسجم بسلاسة مع البيئة المحيطة، مع تحقيق توازن بين الجمال والوظيفة والاستمتاع بالمكان على مدار العام. نستخدم النباتات المحلية، وأنظمة الري الذكية، وتقنيات توفير المياه لضمان نتائج صديقة للبيئة ومستدامة. تبدأ عملية العمل لدينا بدراسة دقيقة للموقع تشمل المناخ والتربة والمساحة، ومن ثم إعداد مخطط رئيسي استراتيجي مع اختيار النباتات والمواد المناسبة لكل مشروع. بعد ذلك يقوم فريقنا من مهندسي ومنفذي تنسيق الحدائق بتحويل التصميم إلى واقع، من خلال دمج العناصر الصلبة (Hardscape) والعناصر النباتية (Softscape) وأنظمة الإضاءة في مساحة متناسقة ومستدامة

INTEGRATED PEST MANAGEMENT

WHAT IS IPM?

IPM is an ecosystem-based strategy that focuses on long-term prevention of pests or their damage through a combination of techniques such as biological control, habitat manipulation, modification of cultural practices, and use of resistant varieties. Pesticides are used only after monitoring indicates they are needed according to established guidelines, and treatments are made with the goal of removing only the target organism. Pest control materials are selected and applied in a manner that minimizes risks to human health, beneficial and nontarget organisms, and the environment.

WHAT IS PEST?

Pests are organisms that damage or interfere with desirable plants in our fields, orchards, landscapes, or wildlands or damage homes or other structures. Pests also include organisms that impact human or animal health. Pests may transmit disease or may be just a nuisance. A pest can be a plant (weed), vertebrate (bird, rodent, or other mammal), invertebrate (insect, tick, mite, or snail), nematode, pathogen (bacteria, virus, or fungus) that causes disease, or other unwanted organism that may harm water quality, animal life, or other parts of the ecosystem.

HOW DOES IPM WORK?

IPM is not a single pest control method but, rather, a series of pest management evaluations, decisions, and controls. In practicing IPM, growers who are aware of the potential for pest infestation follow a four- tiered approach. The four steps include:

ACTION THRESHOLDS

Before taking any pest control action, IPM first sets an action threshold, a point at which pest populations or environmental conditions indicate that pest control action must be taken. Sighting a single pest does not always mean control is needed. The level at which pests will become an economic threat is critical to guide future pest control decisions.

MONITORING & IDENTIFYING PESTS

Not all insects, weeds, and other living organisms require control. Many organisms are innocuous, and some are even beneficial. IPM programs work to monitor for pests and identify them accurately so that appropriate control decisions can be made in conjunction with action thresholds. This monitoring and identification removes the possibility that pesticides will be used when they are not really needed or that the wrong kind of pesticide will be used.

PREVENTION

As a first line of pest control, IPM programs work to manage the crop, lawn, or indoor space to prevent pests from becoming a threat. In an agricultural crop, this may mean using cultural methods, such as rotating between different crops, selecting pest-resistant varieties, and planting pest-free rootstock. These control methods can be very effective and cost-efficient and present little or no risk to people or the environment.

CONTROL

Once monitoring, identification, and action thresholds indicate that pest control is required and preventive methods are no longer effective or available, IPM programs then evaluate the proper control method for both effectiveness and risk. Effective, less risky pest controls are chosen first, including highly targeted chemicals, such as pheromones to disrupt pest mating, or mechanical control, such as trapping or weeding. If further monitoring, identifications, and action thresholds indicate that less risky controls are not working, then additional pest control methods would be employed, such as targeted spraying of pesticides. Broadcast spraying of non-specific pesticides is a last resort.

COMMON PESTS

ANTS

Ants are tiny, highly organized insects that belong to the Formicidae family. They are recognized for their structured colonies and strong teamwork. Found in a variety of species, ants can be black, brown, or red in color. They usually create nests in soil, wood, or inside buildings and can become a nuisance when they enter homes looking for food or moisture.

**GERMAN
COCKROACH**

The German cockroach (*Blattella germanica*) is a small, light brown to tan insect distinguished by two dark, parallel stripes running from its head to the base of its wings. It is well known for its rapid reproduction and ability to thrive in indoor environments. Commonly found in kitchens, bathrooms, and other areas with easy access to food and moisture, this species is primarily nocturnal. German cockroaches are considered a major pest due to their link to unsanitary conditions and their potential to spread allergens and harmful pathogens.

**AMERICAN
COCKROACHES**

The American cockroach (*Periplaneta americana*) is one of the largest cockroach species, with adults growing up to about 1.5 inches in length. It has a reddish-brown body with a distinctive yellowish figure-eight pattern on the back of its thorax. This species is commonly found in warm, damp environments such as basements, sewer systems, and areas around plumbing. Known for its strong scavenging abilities, the American cockroach can adapt and survive in a wide range of conditions.

BED BUGS

Bed bugs (*Cimex lectularius*) are small, oval-shaped insects that feed on human blood. They are reddish-brown in color, about 1/4 inch long, and have flat bodies that allow them to hide easily in cracks and crevices. These pests are nocturnal, typically hiding in mattress seams, bed frames, and furniture during the day. Infestations can result in itchy, red bites and cause significant discomfort and stress. Effective control includes thorough cleaning, regular vacuuming, and treating affected areas with appropriate insecticides. In more severe cases, professional pest control services may be required.

HOUSE FLIES

House flies (*Musca domestica*) are common small flying insects with a gray body marked by four dark stripes on the thorax. Adult flies typically measure between 1/8 and 1/4 inch in length and have large, clear wings. They are strongly attracted to decaying organic matter, garbage, and leftover food. Due to their habit of landing on contaminated surfaces and then on food or household items, house flies can easily spread harmful pathogens and diseases.

SILVERFISH

Silverfish (*Lepisma saccharina*) are small, wingless insects with a silvery-gray, elongated body covered in fine scales. Measuring about 1/2 to 1 inch in length, they have a fish-like appearance due to their tapered shape and wriggling movement. These nocturnal pests prefer dark, damp areas such as basements, attics, and bathrooms. They feed on starchy materials like paper, glue, and fabrics, which can lead to damage in books, clothing, and other household items.

MOSQUITOES

Mosquitoes are small flying insects known for their irritating bites and their ability to transmit diseases such as malaria, dengue fever, Zika virus, and West Nile virus. They have slender bodies, long legs, and a specialized proboscis used to feed on blood. Most species are active during dawn and dusk and reproduce in standing water, where their larvae develop.

RATS

Rats are common rodents known for their adaptability and their ability to cause significant damage and health risks. In many regions, the most prevalent species are the Norway rat (*Rattus norvegicus*) and the roof rat (*Rattus rattus*). Norway rats are larger, with brownish fur and a heavier build, while roof rats are smaller and more slender and are often found in elevated areas such as attics and ceilings.

CONSULTANT APPROVALS

اعتمادات الاستشاري

Consultant approvals are a vital step in ensuring that all project activities meet the required standards, specifications, and regulatory guidelines. They involve reviewing designs, materials, and execution plans to guarantee quality, safety, and compliance before implementation. Obtaining timely approvals helps avoid delays, minimizes risks, and ensures smooth project progress. With proper coordination and documentation, consultant approvals contribute to delivering successful and well-executed projects.

تُعد اعتمادات الاستشاري خطوة أساسية لضمان توافق جميع أنشطة المشروع مع المعايير والمواصفات واللوائح المطلوبة. وتشمل مراجعة التصاميم والمواد وخطط التنفيذ لضمان الجودة والسلامة والامتثال قبل بدء التنفيذ. يساعد الحصول على الاعتمادات في الوقت المناسب على تجنب التأخير وتقليل المخاطر وضمان سير العمل بسلاسة. ومن خلال التنسيق الجيد والتوثيق المناسب، تساهم اعتمادات الاستشاري في تقديم مشاريع ناجحة ومنفذة بكفاءة عالية.
